Learning Objectives

At the conclusion of this activity, the learner will be able to:

1. Apply knowledge learned to everyday clinical radiology practice.
2. Integrate knowledge and performance in the assessment and diagnosis of musculoskeletal sports injury, tumors, trauma and degenerative disease.
3. Identify the anatomy of normal MSK tissues, variants and mimicker of disease.
4. Identify morphologic, histologic and imaging characteristics of MSK disease.
5. Describe the specific pathology that accounts for the appearance of osseous and soft tissues in the setting of trauma, overuse, degeneration, inflammatory/autoimmune and neoplastic conditions on various imaging modalities.
6. Recognize the relationship of specific biomechanical activities, injuries and treatments to the appearance of joints, bone, and soft tissues on imaging, arthroscopic, and pathologic assessment.
7. Review the optimal role of imaging, surgery and histopathology in the diagnosis and management of musculoskeletal disease and health.
8. Identify the complementary role of emerging imaging techniques, modalities, and interventional/therapeutic procedures in the diagnosis and management of specific musculoskeletal conditions.
9. Assess competency in Ultrasound, MRI, and therapeutic approaches in the assessment and management musculoskeletal disorders.
10. To recognize the use of AI which has the potential to greatly enhance every component of the imaging value chain. To identify ways that AI can increase the value MSK imagers provide to their patients and to referring clinicians by improving image quality, patient centricity, imaging efficiency, and diagnostic accuracy.
